Allgemeine Relativitätstheorie 4. Übungsblatt

Marik Becker Kevin Sedlaczelc Helena Nawrath

Gruppe 2

Autobe 1) Paralleltransport out 52

$$\frac{dV^{\Theta}}{d\lambda} = \sin(\Theta)\cos(\Theta)V^{\Phi}\frac{du^{\Phi}}{d\lambda} \qquad (1)$$

$$\frac{dV^{\varphi}}{d\lambda} = -\cot(\omega)\left(V^{\varphi}\frac{du^{\varphi}}{d\lambda} + V^{\varphi}\frac{du^{\varphi}}{d\lambda}\right) (2)$$

a) Längenkreise:
$$\varphi = \varphi_0 \Rightarrow \frac{du^{\varphi}}{d\lambda} = 0$$

$$(1) \Rightarrow \frac{dV^{0}}{d\lambda} = 0 \Rightarrow V^{0}(0) = C_{1}^{(*)} V_{0}^{0} V$$

$$(2) \Rightarrow \frac{dV^{\varphi}}{d\lambda} = -\cot(\varphi)V^{\varphi}\frac{du^{\varphi}}{d\lambda}$$

$$\frac{dV^{\varphi}}{d\omega} = \cot(\omega)V^{\varphi}$$

$$\frac{d\omega}{d\omega} = \cot(\omega)V^{\varphi}$$

$$\Rightarrow V^{\varphi}(\omega) = \frac{C_2}{\sin(\omega)} \frac{(*)}{\sin(\omega)} \frac{V^{\varphi}\sin(\omega_0)}{\sin(\omega)}$$

b) Breitenkreise:
$$G = G = \frac{1}{2} \frac{dU^{3}}{d\lambda} = 0$$

(1) => $\frac{dV^{10}}{d\lambda} = \sin(G_{0})\cos(G_{0})V^{10} \frac{dU^{10}}{d\lambda}$

(2) => $\frac{dV^{10}}{d\lambda} = -\cot(G_{0})V^{10} \frac{dU^{10}}{d\lambda}$

Das DGL-System

$$V^{10} = -\cot(G_{0})V^{10} = -\frac{3}{4}V^{10}$$

Viral gelöst durch wher? At Veliciant Lower shipping of the sin(Gos(G_{0})) or $\frac{1}{2}$
